

***Mini-Scout-Mount-700™* Installation Instructions**

For Remington® Model 700 Rifles with STANDARD contour barrels.

STEP #1. **BE POSITIVE THAT YOUR RIFLE IS NOT LOADED!!!!******

1. Treat ALL guns as if they are LOADED.
2. NEVER let the muzzle point at anything you are not willing to destroy.
3. Keep you finger OFF the trigger.
4. REMOVE the MAGAZINE.
5. OPEN THE BOLT and CHECK the CHAMBER.
6. CLOSE the BOLT, then OPEN it AGAIN and RECHECK the CHAMBER.

STEP #2 REMOVE THE REAR SIGHT.

- START with the rifle on a flat and sturdy table or bench surface.
- Loosen the screw on the side of the rear sight slide.
- Move the rear sight slide down (to the rear) until both of the screws in the sight ramp are exposed.
- Remove the two screws from the rear sight ramp and set the rear sight assembly aside.

STEP #3 REMOVE THE STOCK

- Remove the barrel-receiver from the stock and set aside.
- If you don't know how to remove the stock, consult the firearm owner's manual.

STEP #4 POSITION THE MOUNT BODY

- Place the *Mount Body* on top of the barrel.
- Position the *Mount Body* so its rear end is almost touching the front of the receiver.
- Look down through the two holes in the top of the *Mount Body* and slide it forward or backward until it lines up with the rear sight ramp screws on the barrel.
- Insert the 6-48x3/8 socket head screws (provided) into the holes and secure with the 5/64th hex key (provided).

STEP #4 SECURING THE BARREL CLAMP

- Turn the rifle upside down with the *Mount Body* resting on the table or workbench.
- Place the *Barrel Clamp* over the rifle barrel with holes in the flanges lined up with the threaded holes in the *Mount Body*.
- Insert the flanges of the *Barrel Clamp* into the corresponding recesses in the *Mount Body*.
- You may need to tap the barrel clamp lightly with a soft punch to get the clamp seated onto the barrel and into the recess of the mount body.
- Start the socket-head cap screws provided through the *Barrel Clamp* and into the *Mount Body*. We recommend using some type of medium thread locker on the screws.
- Tighten the screws evenly with the hex wrench provided so they are snug.

STEP #5 RE-ASSEMBLE THE RIFLE

- Replace the stock.
- Work the bolt assembly and check for any binding or contact that interferes with proper operation.
- The *Mini-Scout-Mount*™ does not impede the operation of the rifle in any way.

TIPS & TROUBLE SHOOTING

- Red-dot sights, scout scopes, or pistol scopes can be mounted anywhere along the Picatinny rail to suit the shooter's preference.
- Our *Tactical Light Mount Kit* provides a convenient mounting surface for tactical flashlights, IR illuminators, and even an additional laser sight or holo-sight. Larger flashlights can be mounted with quick-detachable scope rings. There are two different styles of *Tactical Light Mount Kit* to choose from.
- Our *Detachable Sling Mount Kit* provides a convenient and sturdy attachment point for detachable sling swivels and will fit any of our mounts.
- **If you have any problems with the fit or function, break or lose a part, just call or email us.**
